Tighter Bend Radius

Reusable

Reusable Strain Relief

Acme Automotive has improved our industry-leading FLEXEEL® line with the addition of a strain relief that incorporates a built-in reusable fitting. This Reusable Strain Relief fitting is completely field-repairable and always ensures a secure connection, eliminating the need to rig a hose barb with clamps or ties. The new Reusable Strain Relief also provides an extremely tight bend radius, giving the user a greater range of motion, extending the life of the hose, and virtually eliminating the possibility of kinking.

Acme's Reusable Strain Relief . . .

- Is easily and completely **field repairable**
- Has a **tighter bend radius**, which improves flexibility, even at extremely low temperatures
- **Improves maneuverability**, which extends hose life
- Is **durable** to withstand the rigors of the Industrial environment

The Reusable Strain Relief is offered as a standard feature and replaces Acme's barb and sleeve type fittings. Please use Acme's barb and sleeve part numbers when ordering.

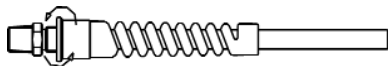

Assembly Instructions

1. Make a square cut on the hose end. Slide strain relief onto the hose.

2. Apply lubricant to fitting barb. Place fitting against a stationary surface and push hose over barb until the hose reaches the threads.

3. Slide strain relief down to fitting.

4. Hold strain relief secure with one wrench, and using the other wrench, turn fitting hex clockwise.
